

## **Project Design Phase**

### **Problem – Solution Fit Template**

Date	20 February 2026
Team ID	LTVIP2026TMIDS64983
Project Name	Importing and Securing Data in ServiceNow
Maximum Marks	2 Marks

#### **Problem – Solution Fit Template:**

The Problem–Solution Fit in this project focuses on identifying the challenges faced by organizations when importing data into ServiceNow and ensuring that each record is properly linked to the respective employee. In many cases, imported records do not contain complete employee information such as department or designation, which creates difficulties in reporting and analysis. Users often spend additional time manually updating records, which leads to inefficiency and errors.

The proposed solution addresses this issue by implementing a secure data import process that automatically links records with employee information using unique identifiers. The system retrieves relevant employee details and populates them into the records, making reporting easier and more accurate. This solution effectively meets user needs by reducing manual work, improving data quality, and ensuring secure handling of information.

#### **Purpose:**

- ☐ Solve data import and employee linkage problems in a way that fits the needs of users working with ServiceNow records.
- ☐ Improve efficiency and increase solution adoption by automating the process of linking records with employee details.
- ☐ Enhance communication and reporting strategies by ensuring accurate employee information (such as department) is available in each record.
- ☐ Increase user trust in the system by reducing manual errors and providing secure data handling mechanisms.
- ☐ Understand the existing challenges in importing data and improve the process for better reporting, decision-making, and operational performance.

## Template:

Define CS, fit into CC	<b>1. CUSTOMER SEGMENT(S)</b> <b>CS</b> ServiceNow administrators and developers IT support teams and HR departments Organizations managing employee records related operational	<b>6.
